

SCREEN BASKET (Perforated/Slotted)

Screen Baskets are the key component in the Pulp & Paper technology process and used for excellent screening. Screen baskets are available for fine and coarse screening to meet the challenge of quality product. Where the end product characteristics such as brightness, opacity, strength and printability are determined, hence cleanliness of pulp is essential in terms of stickies, shives and dirt speck contents. Our Imported Screen Baskets are excellent in screening.

Applications:

- ❖ For Low and Medium consistency screening.
- ❖ In Stock Preparation and Approach flows system.
- ❖ For virgin and secondary fibers.

Salient Features:

- Highest slot width accuracy.
- Suitable for operation with large flat shaped contaminants.
- Special design features avoid string formation.
- Available in slot and hole for all models of screen.
- Basket edges hard faced.
- Dynamically balanced basket.
- Achieve maximum flow, screening efficiency and unprecedented strength.
- Open area allows increased capacity with same efficiency.
- Open area allows smaller slot size that result in increased capacity and efficiency.
- Flow in profile edge creates more turbulence, improving throughput and cleaning efficiency.
- No fiber hang ups with low-pressure drop.
- Screen basket dia upto 1500 mm.
- The special profile ensures smooth and burr free basket.
- Computer controlled manufacturing process ensures high profile accuracy.
- Inter changeability of the screen baskets.
- Excellent surface finish & free of burs.
